Summary

Backend Software Engineer with over three years of experience building scalable server side applications and RESTful APIs. Skilled at developing microservices using Spring Boot and optimizing database performance. Efficient at acquiring and integrating new tools and technologies to solve complex problems. Proven ability to own and deliver backend features across the Software Development Life Cycle enhancing user experience in agile environments.

Experience

Technical Lead

Nov 2024 - Feb 2025

FDM Group

- Managed a team of 4 engineers developing frontend and backend code using IDE tools, leveraging JavaScript, React, HTML, CSS, Java, and Spring Boot to build responsive and scalable solutions.
- Streamlined user registration journey on frontend and backend to reduce customer onboarding by 30%.
- Coordinated with Product Owners, Scrum Masters, and cross-functional development team in Agile ceremonies including daily stand-ups, sprint planning, retrospectives, and backlog grooming to meet sprint goals on time and within scope.
- Increased high code quality and continuous integration through extensive code reviews and GitHub Action workflows that reduced bug rates by 15%.

Backend Software Engineer

Jul 2023 - Nov 2024

Bullish LLC

- Introduced institution self-service in Java, granting institutional admins 100% control over employee accounts and policies.
- Launched API key configuration, reducing redundant key generation by 80% and streamlining access management.
- Engineered email notifications using a RabbitMQ, enabling real-time communication between microservices for urgent customer actions, achieving a 98% message delivery success rate.
- Conducted extensive testing spanning Unit, Pact, Regression, and Manual tests, contributing to two zero-defect production releases.
- Designed, developed, and optimized complex SQL queries utilizing Common Table Expressions (CTEs), subqueries, window functions, and aggregate functions for advanced data transformation and reporting.
- Validated REST APIs using Postman, accelerated backend development and cut validation time by 40% during release cycles.
- Arranged custom metrics and logs in Datadog to monitor websocket ingestion across four exchanges.

Test Automation Engineer

Jul 2021 - Jul 2023

Bullish LLC

- Configured test splitting in Buildkite, decreasing successful regression build times by 50%.
- Migrated 900+ tests from TypeScript to Java, improving test reliability, maintainability, and team collaboration.
- Diagnosed build failures using Kubernetes pod logs and alerted relevant teams within 30 minutes.
- Monitored test stability via Grafana dashboards, improving reliability of high-failure test cases by 60%.
- Integrated the TestRail API to streamline manual QA processes and reduce release cycle times by 20%.

Skills

- **Back End:** Java, Spring Boot, Python, PostgreSQL, MongoDB, gRPC, Hibernate, Flyway, Maven
- **Front End:** React, HTML, Tailwind, TypeScript, JavaScript, Next.js
- **Testing:** JUnit, Mockito, TestNg, Pact, Gherkin, Cucumber, Selenium
- **Tools:** GitHub, Testrail, Kubernetes, Docker, Postman, Redis, RabbitMQ, Kafka, Datadog, Grafana, Terraform
- **Cloud Environment:** AWS (EC2, RDS, Kafka, ELB), GCP (GKE, Cloud SQL, Cloud Logging)

Education

Rowan University

Glassboro, NJ

Bachelors of Science, Computer Science | Minor in Mathematics & Law/Justice
